Question description

Hassan gets a job in a software company in Hyderabad. The training period for the first three months is 20000 salary. Then incremented to 25000 salaries.

Training is great but they will give you a programming task every day in three months. Hassan must finish it in the allotted time. His teammate Jocelyn gives him a task to complete the concept of Postfix to Prefix Conversion for a given expression. can you help him?

Functional Description:

- Read the Prefix expression in reverse order (from right to left)
 - If the symbol is an operand, then push it onto the Stack
 - If the symbol is an operator, then pop two operands from the Stack
- Create a string by concatenating the two operands and the operator after them.
- string = operand1 + operand2 + operator**
- And push the resultant string back to Stack
- Repeat the above steps until end of Prefix expression.

Constraints

the input should be a expressions

Input Format

Single line represents the postfix expressions

Output Format

Single line represents the prefix expression

▼ Logical Test Cases

Test Case 1

INPUT (STDIN)

ABC/-AK/L-*

EXPECTED OUTPUT

*-A/BC-/AKL

Test Case 2

INPUT (STDIN)

AB+CD-*

EXPECTED OUTPUT

*+AB-CD

▼ Mandatory Test Cases

Test Case 1

KEYWORD

string postToPre(string
post_exp)

▼ Complexity Test Cases

Test Case 1

CYCLOMATIC COMPLEXITY

5

Test Case 2

TOKEN COUNT

220

Test Case 3

NLOC

46
